Re: Fluorinated Organic Chemicals PFO's and PFOS's  
Information Requests

EPA

As you may already know about the elevated levels of Fluorinated Organic Chemicals PFO's + PFOS within the city of Lacey Heights that had exceeded the EPA standards that the whole city was put on bottle water and so fourth, however,

As you may not be aware, Much of the food processing that is done at the Arvey Heights Correction Center was using that same water.

On or about May 18, 2017 is when the Department of Corrections Secretary of Corrections Stephen D Sinclair put out a state wide memorandum informing everyone of this situation as we receive (every prison) receives much of our food from Arvey.

And sorry to say, it was down played about the seriousness of this. Nothing to worry about, etc...

At this time, we are not eating anything anyway Heights Community Center makes or uses the city water supply. I have a few questions however and request some information about the dangers of these fluorinated Organic Chemicals PFO & PFOS.

- 1) What kind of health problems does this cause a person who has been exposed to these chemicals, and what are the symptoms that are associated with one who becomes symptomatic,  
Also, Would it affect the older population more than the younger. I would like the information on this.
- 2) Can it cause cancer or any other disease, mentally or physically.
- 3) Is there a blood test that would help to show that a person is or has been exposed over the years.
- 4) How long has the water been like this at Curway
- 5) How long before this problem is corrected.
- 6) Note: To my belief that at least within this

facility they are still serving food that was processed with Cuyahoga water supply such as the ~~as~~ sauce for the ~~as~~ Italian dinners etc.

To the EPA, do you have anyone within your department that should come out here who is familiar with what foods that were processed with the Cuyahoga water supply to see if that food is still being served within the St. Paul Creek Corrections Center Freezers etc.

Do you have any addresses and phone numbers of specific lawyers for persons who get sick by the consumption of this water and, last has there been some kind of set up for the city of Aurora Heights General population where they can go if not checked out by medical personnel. I'll be sure to update one of this.

Thank You Very Much  
Concerned Citizen
